## MUDSCOOPSANDMUDRELEASEDIMPLES

Create air pockets to release mud from the tread, giving you exceptional all-surface traction.

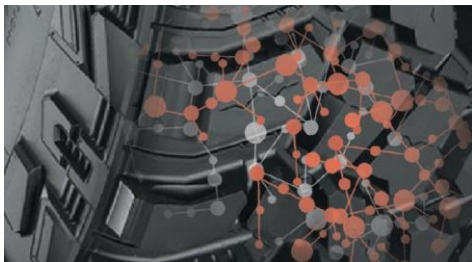

## [MUDSCOOPSANDMUDRELEASEDIMPLESvideo](#)

## FLEX GROOVE

Allows the tyre to flex, dampening the impact generated by inconsistent terrain, giving you more flexibility and a smoother ride.

[FLEX GROOVE video](#)

## ADVANCED SILICA COMPOUND

Formulated with the optimum content of chemically coupled silica reduces cutting and chipping in off-road conditions whilst improving wet traction. This gives you improved wet traction and longevity.

[ADVANCED SILICA COMPOUND video](#)

## ARMOR-TEK3

On top of high tensile construction, the STT PRO features Armor-Tek3 - an additional 3rd ply on an 8° angle. Unique Armor-Tek3 construction is engineered to give you over 2.5 times more tear and impact damage resistance by reducing the rubber gaps by 50% to give you peace of mind when driving off-road. \*Compared to standard 2-ply tyres.

## MICRO GAUGE™ SIPING

Reduce cutting and chipping whilst enhancing traction in wet, soft surfaces, giving you enhanced stability and longevity.

[MICRO GAUGE™ SIPING video](#)

## RAISED RUBBER RIBS

Raised Rubber Ribs and angled groove walls work together to eject stones from the tread, giving you reduced stone retention and more grip.
